Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution. prodata/2/pubpaa/US11A\_PUECOMB.pep: /prodata/2/pubpaa/US11\_NEW\_PUB.pep:\* /prodata/2/pubpaa/US60\_NEW\_PUB.pep:\* /cgn2\_6/ptodata/2/pubpaa/US60\_NEw\_PUB.pep: /cgn2\_6/ptodata/2/pubpaa/US60\_PUBCOMB.pep:

New isolated polypeptide and encoding nucleic acid derived from Staphylococcus epidermidis, useful for diagnosing, preventing and/or treating an S. epidermidis bacterial infection.

Claim 17; SEQ ID NO 6352; 741pp; English

The invention describes an isolated nucleic acid comprising a nucleotide sequence with any of 3772 fully defined nucleotide sequences (SEQ ID NO: 13772) and encoding an Staphylococus epidermidis polypeptide with any of 3772 fully defined amino acid sequences (SEQ ID NO: 3772-7544) as given in the specification. Also described are: a recombinant expression vector, a cell comprising a recombinant expression vector of (1); producing an S. epidermidis polypeptide; an isolated nucleic acid comprising a nucleotide sequence of at least 8 nucleotides in length; a

```
aubject for S. epidermidis infection; a recombinant or aurier; treating a nucleic acid cited above and a carrier; treating a pure preparation of an S. epidermidis polypoptide or its fragment; a vaccine composition for prevention or treatment of an S. epidermidis a vaccine composition for prevention or treatment of an S. epidermidis infection; detecting the presence of a Staphylococcus nucleic acid in a sample; a computer readable medium having recorded in it the nucleotide system for identifying fragments of the Staphylococcus genome of system for identifying fragments of the Staphylococcus genome of the Staphylococcus genome of commercial importance; identifying an expression modulating fragment of commercial important nucleic acid fragments of the Staphylococcus genome and/or plasmids; and identifying an expression modulating fragment of the Staphylococcus genome and/or plasmids and identifying an expression modulating fragment of the Staphylococcus genome and/or plasmids; and identifying an expression modulating fragment of the present invention are useful for the diagnosis, prevention and/or treatment of an Staphylococcal epidermids proterial confidencial in the amino acid sequence of a S. epidermids protein of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   240

```
The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the mucleic acid inhibites proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid cancilled and a promoter operably linked to the nucleic acid conclaining the vector; (3) an isolated conclaining the vector; (3) an isolated by the antisense antisense call containing the vector; (3) an isolated polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits spilling a product is oversypressed or undersypressed; (12) determining the extent or organism acts; (9) manufacturing an antibiotic; (10) profiling a product is oversypressed or undersypressed; (12) determining the extent compound; a activity; (11) a culture comprising strains in which the test compound that inhibits and collection of pathway in which a proliferation required gene or its gene product lies conduct is oversypressed or undersypressed; (12) determining the extent conduct is oversypressed or undersypressed; (12) determining the extent conduct is oversypressed or undersypressed; (12) determining the compound of a collection of strains is proliferation of an organism. The antisense nucleic acids required for proliferation in cells other candidate molecic acids required for proliferation in cells other than S. aureus, S. typhimurlum, continued for proliferation in cells other promoted as encoded by one of the target prokaryotic essential genes requence is encoded by one of the target prokaryotic desential genes production, of the promoted of the p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      124
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    304

The prokaryotes used are Escherichia chemselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, seruginosa and Enterococcus faccalis. The invention is also useful for the identification of potential new tragets for antibiotic development. The antisense nucleic acids can also be used to identify antibodies capable of binding to the expressed proteins. The proteins can can be used to screen compounds in rational drug discovery programmes. The proteins can uncleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein. The present sequence is that of a novel Staphylococcus aureus surface-exposed immunogenic polypeptide (SEIP). To isolate SEIP genes, an expression library of S. aureus genomic DNA was screened with anti-SEIP antisera. DNA was isolated from clones expressing SEIPs, and amino acid sequences were deduced and analysed for conserved and/or functional domains. The present SEIP has sequence homology with the siderophore family of periplasmic binding proteins. The invention provides methods be used indantification, production and recovery of SEIPs. The SEIPs can be used individually, or in combination, to produce anti-staphylococcal antibodies useful in passive or active immunisation strategies to prevent or contain staphylococcal infection. They can also be used to develop
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel surface-exposed immunogenic polypeptide of Staphylococcus aureus containing receptors for siderophores or iron-binding ligands, useful for producing antibodies effective against Staphylococci infection.
